1. This report makes reference to the following document:

D1: WO 98/27054 A (BASF AG; FISCHER, JAKOB; SIEGEL, WOLFGANG; MUNDINGER), 25 June 1998 (1998-06-25)

The present application relates to a method for producing 3-pentene nitrile by hydrocyanation of 1,3-butadiene.

D1 represents the closest prior art and differs from the claimed subject matter in that, after the reaction, the non-reacted 1,3-butadiene and hydrocyanic acid, as well as the other components contained in the reaction mixture, are removed in D1 from the reaction mixture, separated by distillation and recycled; D1 does not disclose features (b)-(d) of claim 1 of the present application, relating to the exact distillation protocol.

The present invention can therefore be considered to address the problem of devising another method for producing 3-pentene nitrile. The solution is presented in claim 1 and relates to the special configuration of the distillative separation of the reaction mixture. A person

skilled in the art could not have deduced from the closest prior art in D1 that the distillation device (K1) used for distilling the reaction mixture comprises at least one distillation column with a distillate portion, and/or that the distillation device (K2) used in the method step (c) comprises distillative separation stages between the inlet of stream 3 and the outlet of stream 5, and that the outlet of stream 5 in the distillation device (K2) lies lower than the inlet of stream 3.

Claims 2-10 are dependent on claim 1 and thus also meet the PCT novelty and inventive step requirements.
